Introduction:

In a nutshell, the Crypto industry is evolving and it needs a more simplified platform and solution which is integrated services within the ecosystem where users can get the most out of it in a simplified UI and without compromising on the security.

The Ecosystem:

AssetfinX, an innovative crypto Eco-system has released its own token for private sale built under ERC20 protocol to provide outstanding benefits for traders. Using our AFX Token, traders can involve in any of the exchange platforms like a Centralized Exchange, Decentralized Exchange, peer-to-peer (P2P) and peer-to-admin (P2A), which brings the vast community to native AssetfinX that extemporize the token value in exchange platform.

AssetfinX is focused on building a user-centric crypto exchange and asset ecosystem with native utility token AFX which will be used as a mode of payment for AssetfinX services under the entire ecosystem.

Our goal is to evolve the Ecosystem of services under AssetfinX with equipped tools and technologies, allows users for acquiring profitable opportunities in terms of saving the trader time and avoiding the hurt of losing out manual process.

Our professionals pegged with innovative strategies to build the ecosystem of services that will wow the users engaged in our exchange platform.

Our Ecosystem is an innovative platform created by our technical specialists and it is the only platform designed with multiple exchange options through a single login in order to reduce the difficulty for the traders by giving all in one exchange platform.

Features of AssetfinX:

Trading pair Options:

AssetfinX is working on the best interest of traders and will find, analyze and list all the best possible trading pairs in the platform and ecosystem.

Low Transaction Fees:

Active traders enjoy the best possible lowest rates in the market.

Easy Transaction:

With AssetfinX, you can make transactions faster for both buying or selling your crypto and other assets within the ecosystem.

Colossal revenue Model

We have designed our ecosystem in such a way that a portion of profit will be distributed back to the community, members or investors in our platform at AssetfinX.

AssetfinX — Ultra Secure Platform

Security is a vital part for the users to look into before investing in exchange. We undertake good security practices like 2-factor authentication, cold storage, email encryption, Multisig wallets, SSL Encryption, IP change verification, which ensures that your asset is secure.

Quantum Resistant Ledger

We are actively working on Quantum Resistant Ledger which aims to tackle all the future attacks from quantum computers. This focuses on limiting future risks.

AssetfinX — Octowill Beneficiary assignment services

We provide Octowill Beneficiary Assignment service which helps our platform users to assign beneficiary who can inherit the assets in simple steps.

Others:

We are also working on More features that Inspires the Traders that are Trade & win, scratch & win, ambassador activity, Trading Bot. AssetfinX features will be extended further to delight our customers, so traders will enjoy the trading experience of AssetfinX.

The problem?

Currently, the exchange platform is facing several challenges and issues while building the ecosystem of services to their platform users.

Great techies have deep knowledge in combining many exchanges in a single platform, but little experienced community / users prefer a simple approach for making it. This might operate well in the starting stage, merely it could not control the load of the system once usage grows.

Many exchanges have fallen due to security issues and hacking. Assuring the security of the financial system is expected from investors involved in any of the exchange platforms. Because they are losing life-shattering amounts upon transactions due to fraudulent activities.

Both professional and normal traders are affected by shrinking liquidity. Holding shoal order-book is high slippage during trading, it is highly-priced for traders. This makes exchange servers down and increases scaling issues.

Most of the exchanges are not focused on analyzing traders' minds, this causes threats to the exchange platform and still many exchanges are not supporting multiple languages. Moreover, many exchange platforms are not looking forward to procuring more trading pair which is an obstacle for customers to make the trade they want.

There are several exchanges available in the market, but they are restricted in providing advanced features to the traders.

Exchange platform that is efficient when all those challenges are overwhelmed. Presently there is an imbalance in that only elite team can sort out these issues to provide an efficient trading platform to the customers

Solutions

Our aim is to put multiple modules and features together with the single sign-on ecosystem, which makes it simple and easy for the customers.

We provide a preeminent trading experience and it is the only platform where the users can avail the benefits of centralized. DEX and P2P trading, Wallet and

Custody services. Besides this peer to admin trading is also possible in our platform.

AssetfinX is the world's first exchange platform that supports Beneficiary Assignment Services powered by Octowill. which is great value for the users and their funds will be safely inherited by the nominated beneficiaries.

AssetfinX platform is designed by the experts having a huge experience in the development who is capable of providing an exchange platform with advanced technology.

Our AfX token are built with quantum-resistant ledger to avoid future assaults from quantum computers. This is one of the supreme excellence of our AssetfinX platform unmatched with other exchange platform.

We ensure the highest security standard for our users in our ecosystem as we have a tremendous experience upon building financial systems.

Also, we offer incentives to our traders including referral schemes or profit-sharing program which makes traders get profit out of an exchange. We prefer a collective pool server where the order-book shared among different exchanges to allow transactions when there is no adequate liquidity in one exchange.

Trade Anytime Anywhere:

Desktop wallets have an inbuilt exchange that not only stores the information but also enables users to exchange Blockchain-based assets. However, it has quickly gained popularity among traders primarily because of its versatile design. It displays the real-time value of digital assets using great live charts. In addition to that, Exodus Wallet also allows users to personalize their portfolio by changing themes, background color, and other features to suit their style and preference.
